

FIXTURE MOUNT OCCUPANCY SENSOR

LINE VOLTAGE

OVERVIEW

The **INTELLIGENT LIGHTING CONTROLS** fixture mount occupancy sensor series is an excellent solution for high bay and industrial lighting control. With its universal lens that provides excellent range and density, this sensor removes the need to classify an application as low bay, high bay, or aisleway. Additionally, integrated tabs on its chase nipple reduces installation time and fuss by firmly attaching to a fixture via a standard knockout. **INTELLIGENT LIGHTING CONTROLS** products utilize the latest passive infrared technology and digital signal processing techniques to provide unmatched detection performance.

BASIC OPERATION

Sensors detect movement in the infrared energy that radiates from occupants as they move within the device's field-of-view. Once occupancy is identified, the sensor's internal relay switches power on to the connected lighting. An internal timer is set to keep lights on during brief periods of inactivity, and is reset every time occupancy is signaled. Optional daylight detection is also available that dims or turns off controlled lighting according to the ambient light levels present in the space.

APPLICATIONS

Line voltage sensors are self-contained units that directly power from and switch 120/277 VAC. In a fixture mount application, they typically control a single fixture.

- Garage
- Distribution Centers
- Manufacturing Areas

 **intelligent**
lighting controls

FEATURES

- Universal Lens Works for High Bay, Low Bay, & AisleWay Applications
- Greater Detection Range & Density than Leading Highbay 360° & Aisleway sensors
- Digital Passive Infrared (PIR) Detection
- Optional Dimming Output Enables Configurable High/Low/Off Operational Modes
- Snap-In Chase Nipple Makes Installation Quick
- Integrated Bracket Drops Sensor Below Bottom of Fixture
- Electronically Timed Switching Designed for LED Fixture Control
- Convenient Test Mode and Adjustable Time Delays
- Optional Photocell for Daylight Harvesting & Inhibit Applications

SPECIFICATIONS

ELECTRICAL

OPERATING VOLTAGE
MVOLT (120-277 VAC)

LOAD RATINGS
800W @ 120 VAC
1000W @ 208 VAC (2-Phase)
1200W @ 277 VAC

LOAD TYPES
Tungsten
Ballast
LED

ENVIRONMENTAL

OPERATING TEMP
32°F to 122°F (0°C to 50°C) - Standard
-40° F/C (with -HE Option)

RELATIVE HUMIDITY
0-95% Non-Condensing,
Indoor Use Only

PHYSICAL

SIZE
4.00" Diameter x 3.00" H
(10.16 x 7.62 cm)

WEIGHT
5.00 oz

COLOR
White

OTHER

LISTINGS
Meets ASHRAE Standard 90.1
& CEC Title 24 Requirements

ORDERING INFO

SAMPLE MODEL # ILC-SWX-501

	PRODUCT	DETECTION	COVERAGE	0-10V DIMMING OPTIONS	ENVIRONMENT	ADDITIONAL OPTIONS

*NOT AVAILABLE WITH PIR + PHOTOCELL VERSION
**REQUIRES PIR + PHOTOCELL VERSION

PHOTOCELL & DIMMING OPTIONS

ON/OFF PHOTOCELL OPERATION

Sensors with an integrated photocell option (e.g. model ILC-SWX-511) will turn lights on/off depending on the amount of ambient light detected. This operation makes them ideal for lighting near skylights, windows, or large bay doors.

DAYLIGHT HARVESTING

Sensors with the daylight harvesting option (e.g. ILC-SWX-511-D) are capable of automatically controlling the level of 0-10V dimmable fixtures according to the level of detected ambient daylight. Once fully dim, by default these sensors will then turn lighting completely off if daylight levels are sufficient to maintain the desired overall lighting level. It is also configurable to have lighting stay at the full dim level and never turn off from daylight.

HIGH/LOW/OFF OPERATION

0-10V dimmable fixtures can be controlled with a high/low/off sequence of operation by adding the High/Low option (HL). With this mode, the sensors will drop the lighting level to a low setting after the occupancy time delay expires. Then, after a second time delay, the sensor will shut the fixture off completely. Alternatively, leaving the sensor's relay disconnected will cause the fixture to stay at the full dim setting (but never turn completely off) for the duration of the unoccupied period.

NIGHT LIGHT OPERATION

To enhance nighttime safety in facilities equipped with 0-10V dimmable fixtures, a NightLight operational mode (NL option) is available on sensors equipped with a daylight harvesting photocell. In this mode, fixtures will dimmed and then turned completely off during periods with sufficient daylight. However, during periods with insufficient daylight (i.e. at night) lights are held at a dimmed level during unoccupied periods (however not switched off).

OPERATION SETTING

OPERATION SETTING (* = DEFAULT)

- Primary Occupancy Time Delay: Test Mode, 30 sec, 5, 10*, 15, 20, 30 min
- Secondary (Dim to Off) Time Delay: 0, 30 sec, 2.5*, 5, 10 min
- Ambient Light Threshold: Auto-Setpoint, 7 Preset Levels, Disabled
- High Trim: 10V*, 9V, 8V, 7V, 6V, 5V
- Low Trim: 0V, 1V, 2V, 3V*, 4V, 5V

- LED Intensity: Low, High*
- Operational Mode (Occupancy):
 - ILC-SWX-501, SWX-511: On/Off*
 - ILC-SWX-501-HL: High/Low/Off*, High/Low
 - ILC-SWX-511-D: High/Low/Off, High/Low*
 - ILC-SWX-511-NL: High/Low/Off, High/Low*

COVERAGE PATTERNS

UNIVERSAL LENS

- Detects walking size motion or larger (e.g., forklifts)
- Single lens provides detection at mounting heights from 8 ft to 40 ft +
- Detection range improves when walking askew to sensor compared to directly at it
- Typical coverage radius ~1.2 x mounting height

HIGH BAY MOUNTING

LOW BAY MOUNTING

WIRING

SINGLE PHASE WIRING

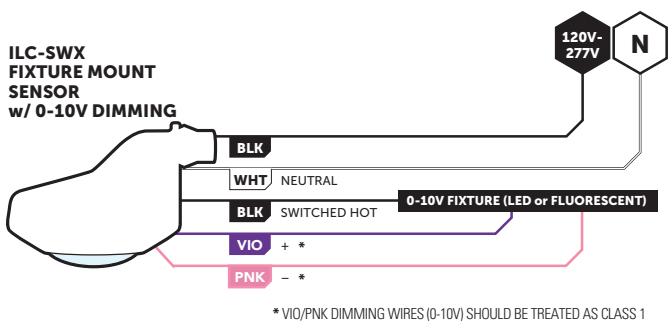

2-PHASE WIRING (208 VAC)

DIMMING WIRING

- Dimming wires are present on models with -D, -HL or -NL option

INSTALLATION

FRONT

ENCLOSURE INTEGRATES
~ 3" OF DROP DOWN
FROM FIXTURE KNOCKOUT

SIDE
