

LightSync Serial Interface Input Control Module RS-232/485 Details

LightSync Device Count Setting

Add the value of each switch to the base value of 1

Sw #	Value
1	1
2	2
3	4
4	8
5	16
6	32

Example count
 $1(\text{base}) + 1 + 4 + 8 = 14$

The LightSync LSSIICM RS-232/485 module is for interfacing a BAS or AV system with ASCII or ModBUS protocol. This device is a LightSync input module and is addressed in the LS network as one, or up to 64 LS devices as needed. This module supports RS-232 or RS-485 communication and receives commands from the BAS or AV system to trigger the assigned LightSync switch input points.
