Use the tip of a small standard straight blade screw driver in slot to push open the spring clamp and insert wire into terminal mouth.

Inputs support typical wire distances of 3000 feet using 18AWG wire.

General:
- Accepts a 24VDC return control signal from occupancy sensor.
- Max power output of 800mA @ 24VDC.
- Connectors accept 28 to 14 AWG wire.
- Conditional logic is configured using the provided software and programming module.
