

Retrofit Rev. A LightSync Touch Screen Station To Rev. B TSS Wiring Details

Wiring Procedure:

1. Power down the circuit to the 5VDC power supply.
2. Cut off the MTA connector from existing 5VDC leads.
3. Strip the ends of the wire and crimp on new leads, red to red, black to black.
4. Move LightSync CAT-5 data cables from controller card in the enclosure to the new touch screen.
5. Set LightSync address and switch count on touch screen to match existing settings on controller card.
6. Power-up and test.
