

# ILC-LR01F600 Wiring Details

Selectable Forward or Reverse Phase Dimmer  
operated by the R20D relay and EVO panel

The ILC-LR01F600 selectable phase dimmer can be operated by the R20D relay as shown or a panel relay for positive off and LSDM module for 0-10VDC control. This dimmer has a field settable switch for selecting trailing or leading edge dimming.

- Connect the LR01F600 input to the relay load output, neutral and the 0-10VDC dimming control.
- Connect the lighting load to the dimmer output and neutral.
- Set the selector switch for trailing or leading edge operation.
- Verify all connections before turning on line voltage breaker.
