

# Office Layout with Wireless-Direct-Linked Devices, Networked LLEVO-W Controller and Wired LLEVO Controller

## OVERVIEW:

The LightSync G3 Wireless switches are wireless-direct-linked to the area relays. Occupancy sensors and relays are linked to the LLEVO-W controller to provide network operation, The LLEVO-W controller is networked to other panels via CAT-5 data cable. All wireless devices are located within 100 feet direct line-of-sight to the relays or LLEVO-W controller. The LLEVO wired controller is used in an area with poor radio reception and network controls such as the stairwell lighting where wireless network control may be difficult.
